## Abstract

The purpose of this project is to document the creation of a modern website application with the intention of helping middle and high school students research more effectively and with greater intent. The primary means by which this will be accomplished is through allowing students to "tag" notes they collect from their research with different domain-specific elements. This will allow students to think about the topics that they are researching in less linear ways.

## Acknowledgements

I wish to thank Dr. Barb Stedman for encouraging me to tackle this project and showing the support of the Honors College. I also wish to thank my Thesis mentors, Jonathan Huir and Gunnar Hoffman, for their support. I wish to thank the Indy.rb Ruby Group for help along the way with programming issues, specifically Matt Swanson and Miles Sterrett. Finally, I wish to thank my parents and my girlfriend, Daniela Sorrell, for their love and support.
